WHY COMPUTER SCIENCE *IN SIENA?*

1. **You can take the courses you need**
   Courses have been selected with the Department of Computer Science at the University of Virginia, our partner and School of Record. CS class sizes are small, allowing more attention and collaboration from faculty.
2. **Italy has a long history in the applied sciences**
   Did you know? The first mainframe computer systems were developed by the Italian company Olivetti and the first commercial microprocessor was designed by Italian Federico Faggin.
